

THE CURRENT WEATHER REPORT LIVE FROM TYROL

WEATHER IN SERFAUS-FISS-LADIS

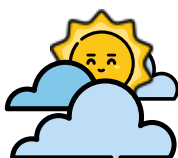

Your holiday is approaching swiftly and the anticipation is growing. The first question that comes to mind: How is the weather going to be in the Alps of Serfaus-Fiss-Ladis? All current weather data and daily trends, including forecast for the upcoming days, are available at a glance now!

today, Sunday 28.04.2024

A warm foehn-like southern flow will determine the weather until Wednesday. Very sunny and early summer-like conditions are generally expected on Monday and on Tuesday. Only harmless, thin clouds will occasionally interfere with the sun. The freezing level will rise to around 3400 meters above sea level. On Wednesday, clouds will slowly thicken from the south, but precipitation is not yet an issue. These clouds are harbingers of a low-pressure system that will slowly move over the Alps from Thursday onwards, bringing us with it heavy cloud cover and repeated precipitation. It is not excluded that following this, the low-pressure system will draw in significantly colder polar air from the north, initiating the next northern flow.
